3D Tester analog DCONMS=12mm

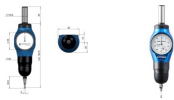

423,64 € *

* Prices excl. legal value added tax plus shipping costs

Brand: Kemmler GmbH

Order no.: 702.8.12

Application:

Search for the neutral point and raise in 3-axis, x, y and z.

The 3D probe impresses with its slim and attractive design. Its precise and versatile application options allow workpiece zero points and length dimensions to be determined quickly and easily.

Probing is possible in all axis directions (X/Y/Z) with the same pointer resolution.

As soon as the pointers indicate "0", the spindle axis is precisely positioned on the edge of the workpiece.

Protection of the measuring unit takes centre stage. To this end, large overtravel distances have been integrated into the probe unit. These are limited by mechanical end stops. The stylus has a predetermined breaking point at the very top. If your 3D probe is nevertheless damaged by external force, it can be easily repaired at low cost.

Note:

- not waterproof
- without test certificate
- without serial number
